John Example

Norm
  Mild
  Moderate
  Severe

Highlighted Muscle Indicate Side of Imbalance

A static SEMG evaluation was performed to assess SEMG activity of various muscle sites. The graphics above exhibit the SEMG activity of John Example during neutral rest posture.

In the neutral SITTING position, the right Thoracic PS 10, left Thoracic PS 12 site(s) exhibited a MILD (> 1 STD) level of elevated muscle activity and are considered to be of clinical significance.

In the neutral SITTING position, the left Lumbar PS 1 site(s) exhibited a MODERATE (> 2 STD) level of elevated muscle activity and are considered to be of clinical significance.

In the neutral SITTING position, the right Thoracic PS 12, right Lumbar PS 1, right Lumbar PS 3, left Lumbar PS 3, right Lumbar PS 5, left Lumbar PS 5 site(s) exhibited a SEVERE (> 3 STD) level of elevated muscle activity and are considered to be of clinical significance.

This SEMG evaluation is considered an adjunctive modality, the results are considered when used in conjunction with other patient exams.
